## How to read this

Every frame carries a VIDEO-ABSOLUTE time -- seconds from the start of the video at the URL above, NOT seconds from the start of the bout -- printed as text directly above it. Those times run from 50:00 to 59:40.

Return every timestamp in that same video-absolute clock. If the bout starts partway into the video, say where it starts as a separate field -- do not rebase the event times to it. A bout-relative time reported as an absolute one places the whole fight in a different part of the broadcast, and the result looks plausible while being wrong.

THE CAPTION TEXT BESIDE EACH FRAME IS A GUIDE, NOT GROUND TRUTH. It is an auto-caption of live commentary: the commentator misnames athletes, talks about one bout while another is on screen, anticipates and speculates, and the text lags the picture. When the caption and the frame disagree, THE FRAME WINS. Use the caption to orient where to look and to break a tie on a label -- never to record an event you did not see in the frame itself.

For each event you can see, give:

|                         |                                                                               |
|-------------------------|-------------------------------------------------------------------------------|
| <code>ts</code>         | integer seconds, video-absolute                                               |
| <code>label</code>      | a technique name, taken verbatim from the label list                          |
| <code>actor</code>      | which competitor did it, by name                                              |
| <code>successful</code> | true if it landed, false if attempted and stopped                             |
| <code>type</code>       | one of: control, submission, guard, takedown, pass, transition, sweep, escape |
| <code>points</code>     | points the scoreboard awarded for THIS action; omit if you cannot read it     |

Points are the one thing the scoreboard is authoritative for, and reading footage is the first time they are visible at all -- a transcript only ever carried what a commentator said aloud. So: report `points` only when you can actually read the number change on the scoreboard between frames, attribute it to the action that caused it, and OMIT the field otherwise. Never write 0 to mean 'I could not tell' -- an action that scored nothing and an action nobody could score are different facts, and only an absent field holds the second. If the score jumps and you cannot see which action earned it, say so in `note` on the nearest event rather than guessing an attribution.

Also return, once per bout: the two competitors' names, the event/card name, the year, who won and how, `bout_start_seconds` -- the video-absolute second the bout begins -- and `final_score` as "a-b" if the scoreboard shows one. If this video contains more than one bout, return one such object per bout.

LABELS ARE A CLOSED VOCABULARY. Take each `label` verbatim from `node_library.json`, which lists every technique the library knows, most-used first. A label is normalised into a node key, and that key IS the node in every graph it reaches -- so a spelling the library does not have does not fail, it mints a second node, and one technique arrives split in two with no error anywhere. Where two listed names could both fit, take the one printed higher: that ordering is how often the corpus already uses it. If a frame genuinely shows something the list does not cover, use your own words and flag it as `new_label: true` rather than bending it into the nearest listed name.

NOT EVERY FRAME IS LIVE ACTION. A broadcast cuts to slow-motion replays, usually right after a finish or a scoring exchange, and a replay looks exactly like the thing it replays. Read one as new action and the same event is recorded twice, seconds apart, which downstream reads as a repeated technique rather than one shown twice. Tells: a graphics bug or logo appears, the clock stops or disappears, the camera angle changes, the action repeats something you already saw. Skip those frames rather than logging them, and say in the note which range you treated as replay.

AND NOT EVERY FRAME IS THIS BOUT. A broadcast cuts away -- to another mat, to a different match's scorecard, to a crowd shot or an ad -- and it may show two bouts in sequence with a gap between rounds. A reader found exactly that in this batch: a scorecard from an unrelated match sitting in the middle of the sampled frames. Events read off a cutaway land on the wrong athletes entirely, which is worse than missing them. Before logging any event, confirm the frame shows the two competitors you identified, and say in the note which ranges you excluded as not-this-bout.

THE SCOREBOARD'S NAME ORDER IS NOT A MAT POSITION. A lower-third graphic puts one name left and one right by broadcast convention; which competitor stands where on the mat is unrelated and changes shot to shot. Binding a name to a body through that order is the single highest-cost error available here, because `actor` is on every event -- get it backwards and the whole answer inverts at once, while still looking internally consistent. Bind identity to something carried ON the athlete instead: a name printed on the back of the rashguard, kit colour, sleeve length, an ankle band, hair. Then check that discriminator against a frame where the scoreboard and the bodies are visible together, and say in `identity\_verified\_by` which frame did it.

REPORT ONLY WHAT YOU ARE CONFIDENT OF -- but report uncertainty by getting COARSER, not by staying silent and not by guessing. If the frames show that something happened and you cannot tell exactly which technique it was, use the generic label the library already carries -- `Guard Pass` rather than a named pass, `Takedown` rather than a named entry, `Submission` rather than a named finish, and likewise `Sweep`, `Escape`, `Guard`. A generic label is the honest answer at the resolution these frames give you; a specific one you inferred is a claim about a technique nobody saw, and once it is in the athlete's graph nothing downstream can tell it from an observed one.

This matters most across the sampling gap. At one frame every 20s a technique can start and finish between two samples, leaving only its result visible -- a competitor who was on top now now underneath, a grip that is now a finish. Recording that result generically is correct. Naming the entry you did not see is not, however obvious it feels. The same rule covers `actor`: if you cannot tell which competitor did it, say so in `note` rather than picking one, because a right technique on the wrong athlete is two errors.

The result line at the top, when there is one, comes from the athlete's BJJ Heroes record. It is there so you can tell the two competitors apart and know the bout ended -- it is NOT evidence of anything you cannot see. Do not report a finish, a technique or a score because that line names it: an armbar listed as the method and an armbar visible in the frames are two different claims, and only the second belongs in your answer.

Only report what a frame actually shows. The scoreboard settles POINTS and nothing else: a technique you infer from a score change but never see is worth less than an omission, because a wrong label propagates into the athlete's graph and their rating and nothing downstream can tell it from an observed one. An omission is recoverable; an invented event is not.

50:00 (3000s)

Yeah, maybe he's an arch nemesis, but I don't think that Big Dan's worried. He's he's had Ramos number in these opens, man. Damon Ramos and fighting us in the corner from Austin, Texas representing JiuJitsu, Dan.

50:20 (3020s)

[Applause] And we're off. And Big Dan has made easy work of everybody he's gotten his hands on this weekend. I don't think he spent more than two minutes on the mat with anybody. Look at the crowd that has formed in the Avalon ballroom here as well. Dan going for his. Oh my goodness.

50:40 (3040s)

Damon Ramos immediately takes the match to the ground not 30 seconds into the match. But you know, despite his Oh, look at this. False reap. And nice job by Ramos clearing the knee. Despite his big imposing figure, you know, Dan likes to play that guard and he's very good at creating off balances, getting underneath his opponent,

51:00 (3060s)

entering the legs. But this is really Oh, he's going for that knee bar. Something he is so good at. We saw him use that at the UFC Fight Pass Invitational as well. Steps around. Ramos doing a good job fending him off so far. But Big Dan, he let go of the body lock.

51:20 (3080s)

Ramos creating a knee shield here. He wants to pummel that butterfly hook back in. Dan's got him flattened out. Bad spot for Ramos. These two shared the mats at the 80C Chicago Open as well in the absolute division. And it was Dan Monosyo who was

51:40 (3100s)

able to wear down the guard. Oh, look at that. David Ramos, Big Dan felt a little bit of a threat and he sat back quick. Ramos testing out this AO lock.

52:00 (3120s)

Yeah, in their last match it was Dan Monosoy was able to wear down the guard of Damon Ramos, but will Damon Ramos be able to more active guard this time. Looks like a little bit of a switch. And you know, what was a bumbling and loud uh ballroom earlier on in the day has become a respectful silence.

52:20 (3140s)

Back to the butterfly hooks for Ramos. Big Dan stepping over looking to clear that knee. And he does. And he's got Ramos flattened out. He's got the under hook now. Working into double under hooks.

52:40 (3160s)

Cuts the hips, putting the pressure down on the upper body. And here he goes stepping around and passing the guard. This match, a finals match, is slated for eight minutes. So the halfway point of this match will be four minutes in which points will come into effect.

53:00 (3180s)

His Ramos leaving his leg behind there in the half guard. He's got to be careful. Dan loves that dog bar knee bar done with the legs and the hips. Yeah, a knee bar is traditionally done from the over under pass. Yes, but Dan's so big, he can just make it happen. He makes it happen. And here he goes. Tripod up. Here comes the shoelaces to the inside. And Ramos again saves that pass. Ramos doing a good job with his guard retention so far.

53:20 (3200s)

Two under hooks for Monosoy. Trades off looking for the cross face. There it is.

53:40 (3220s)

Able to create a little bit of space for the time being is Damon Ramos. But once again, floating past the leg. And you can see on Ramos's face that he's wearing this weight. Dan slowly grinding him out as we approach about 25 seconds now until the points are active.

54:00 (3240s)

Stepping over clears it into the mount. This bad spot for Ramos already into the chopping block. Thinking about the arm triangle. Damon trying to kip up and get a little bit of space to get perhaps a hook back in.

54:20 (3260s)

You heard it there. Points are now active. Ramos tries to bump those hips. Dan's going to try to smother him. Something that Dan has become, I would say, famous for. Yeah, absolutely. For good reason.

54:40 (3280s)

Ramos up to his hip here. And he pulls back in. Nice work by Ramos. saved himself from a position that not many people survive. Dan though immediately tough spot. Yeah, he's going to score here as soon as he got an opportunity.

55:00 (3300s)

Big Dan up three-0 off of that guard pass. Willingly put himself back into the half guard. Dan staying low and heavy, controlling the hips. Ramos big straight frames trying to push him away.

55:20 (3320s)

Trying to get a little teeter to one side just to get back apart of an under hook. Ramos switching off to the lock down.

55:40 (3340s)

Dan drops his hip immediately shuts that off. heavy pressure. Uses that to pass again into the mount. He'll get three more for that pass. Let's call it two more. There it is. There's the six.

56:00 (3360s)

And again, Ramos able to sneak his way back into the guard. 220 to go. Dan just passing at will. My goodness. Another one that's going to make it n. Got him. Dan Monosoyu hits a smother in the finals of ADCC East Coast Trials,

56:20 (3380s)

punches his ticket to ADCC Worlds 2024 at the T-Mobile Arena. [Applause] Wow. What a way to kick things off here in the finals, BMAC. Just a dominant performance once again from Dan Monosoyu.

56:40 (3400s)

He's so much better than he was at this time last year. Like just his technical skill has just taken tremendous leaps. You can tell he's been putting in hard work in the gym. Here's a little look at that replay. Brandon and it was early play by Ramos to put him on his back but

57:00 (3420s)

it was just the pressure from Big Dan nonstop able to pass multiple times just wore Ramos down to the point where the smother choke was just too easy. All right, ladies and gentlemen, we'll be right back after a quick break.

57:20 (3440s)

All right, ladies and gentlemen, the under 99 kilogram championship. Please welcome Alex.

57:40 (3460s)

[Applause] Let's go. [Applause]

58:00 (3480s)

Please.

58:20 (3500s)

All right, this our under 99 kg division championship between Paul Ardia and Alex Grandandy. Alex Granny at a 10th planet.

58:40 (3520s)

Very rough, very aggressive competitor with a great technicality for sure, but definitely I think one of the mile markers is his tenacity. And Paul Ardia coming off of a very technical victory versus another tactician in Adrien Nez.

59:00 (3540s)

I'm excited for this one. This is going to be a real a real war. Both these guys very strong standup game. Both these guys very strong passers, but it's going to be the story of this match is really going to be the technical precision of Ardila versus the grit and the tenacity, the aggressive

59:20 (3560s)

play of Alex Grandandy. Grandandy finding himself in the finals. Got here through a war with Johnson. Arila no stranger to this position. He finds himself in the finals yet again. three times ADCC trials champion

59:40 (3580s)

[Applause] from American Top Team in Atlanta. And our referee, head of ADCC North America, Miguel Bonitez,
